

Brainstorm & Idea Prioritization Template

Idea	Description	Impact (1–5)	Effort (1–5)	Priorit y	Selected?
Agent training only	Train agents to fill fields correctly by habit	1	1	Low	No
Business Rule (server-side) validation	Block save server-side when data is invalid	3	3	Medium	No — no live UI feedback
UI Policy	Declarative mandatory/read-only control based on form condition (Impact = High)	5	2	High	Yes
Client Script (onChange)	Auto-populate Urgency when Impact changes	4	2	High	Yes
Client Script (onSubmit)	Custom save-time validation with a specific message	5	2	High	Yes
Client Script (onCellEdit)	Block risky inline State edits from the list view	4	2	High	Yes
Data Policy only	Server + client mandatory enforcement	3	1	Medium	No — can't do read-only/list-edit blocking
Workflow/Flow Designer approval	Route high-impact incidents through an approval flow	3	4	Low	No — out of scope, adds process overhead

Prioritization outcome: The four selected ideas (UI Policy + three Client Scripts) together give the highest impact for the lowest implementation effort, and are the only combination that covers all required behaviors — mandatory fields, read-only fields, auto-population, save-time validation, and list-edit blocking.
