

Project Testing Phase

Implement Client Script & UI Policy (Incident)

1. Objective

This phase validates that the UI Policy (High Impact Control) and the three Client Scripts (onChange, onSubmit, onCellEdit) behave exactly as designed on the Incident form and list view — including mandatory enforcement, read-only enforcement, auto-population, the reverse-condition path, and list-vs-form edit behavior.

2. Test Environment

Item	Detail
Instance	ServiceNow Personal Developer Instance (PDI)
Table under test	Incident [incident]
Components under test	UI Policy 'High Impact Control', 2 UI Policy Actions, 3 Client Scripts

3. Test Activities

Activity 1: Test Mandatory Enforcement

Step	Action	Expected Result	Actual Result
1	Navigate to Incident -> Create New	New Incident form opens	Pass
2	Set Impact = High	UI Policy + onChange script trigger	Pass - Urgency auto-set to High, read-only
3	Leave Assigned To empty	-	-
4	Click Submit	Save blocked	Pass - onSubmit script fires
5	Verify result	Error message on Assigned To field, incident not saved	Pass - "Assigned To is mandatory for High impact incidents." shown

Activity 2: Test Successful Save

Step	Action	Expected Result	Actual Result
1	Fill Assigned To with a valid user	onSubmit condition satisfied	Pass
2	Click Submit	Incident saves	Pass - No errors
3	Verify	Urgency auto-set, Urgency read-only, Assignment group mandatory honored	Pass - all behaviors confirmed

Activity 3: Reverse Condition Test

Step	Action	Expected Result	Actual Result
1	Open existing Incident with Impact = High	Record opens	Pass
2	Change Impact from High to Medium	UI Policy 'Reverse if false' triggers	Pass

3	Verify Assigned To	No longer mandatory	Pass
4	Verify Urgency	Editable again	Pass
5	Save record	Saves without errors	Pass

Activity 4: Test List Edit Blocking

Step	Action	Expected Result	Actual Result
1	Navigate to Incident -> All (list view)	List loads	Pass
2	Double-click State field on any row	Inline edit starts	Pass
3	Attempt to change value	onCellEdit script intercepts	Pass
4	Verify	Alert shown; State value unchanged	Pass

Activity 5: Test Form-Based Update

Step	Action	Expected Result	Actual Result
1	Open the same Incident record	Form opens	Pass
2	Change State field on the form	Allowed (no list-view restriction applies)	Pass
3	Click Update	Record saves	Pass - State change saved successfully
4	Verify other fields	Assigned To / Urgency still follow configured rules	Pass

4. Test Summary

Test Area	Result
Mandatory field enforcement (Assignment group / Assigned To)	Pass
Read-only enforcement (Urgency)	Pass
Auto-population (Urgency on Impact change)	Pass
Reverse-if-false behavior	Pass
List edit blocking (State)	Pass
Form-based update still allowed	Pass

5. Overall Result

All test cases passed. The UI Policy and Client Scripts behave as designed across every scenario, including the reverse condition and the list-vs-form edit paths. See the related User Acceptance Testing Report in this folder for sign-off details.

6. Note

Replace the "Actual Result" entries above with your own screenshots/evidence when you run these tests on your own ServiceNow instance.
