

Project Demonstration Document

Implement Client Script & UI Policy (Incident)

1. Demo Video Requirements

Per SmartBridge submission guidelines, the demo video must include:

- Screen sharing of the project
- Student's voice-over/explanation
- Project Name
- Purpose of the Project
- Use/Benefits of the Project
- Project Execution/Working Process
- Final Output

The video must be uploaded to Google Drive with sharing set to Public / Anyone with the link can view.

2. Demonstration Script / Outline (approx. 5-7 minutes)

2.1 Introduction (30-45 sec)

"Hi, I'm [Name]. This is my project: Implement Client Script & UI Policy (Incident), built on the ServiceNow platform as part of the SmartBridge ServiceNow Administrator course."

2.2 Purpose of the Project (30-45 sec)

Explain the problem: Incident records often get submitted with missing or inconsistent data (no assignment group, wrong urgency, uncontrolled state changes), which hurts triage, SLA compliance, and reporting. This project enforces data integrity at the UI level using UI Policies and Client Scripts.

2.3 Use / Benefits (30 sec)

- Ensures High Impact incidents always have an assignment group and an assigned agent before they can be saved.
- Keeps Urgency automatically aligned with Impact.
- Prevents risky, ungoverned State changes from the list view.
- Fully declarative/scriptable - no schema changes, easy for any admin to maintain.

2.4 Execution / Working Process (3-4 min) - screen share

Walk through, in order:

1. Show the High Impact Control UI Policy (condition: Impact is High, Reverse if false = true).
2. Show the two UI Policy Actions (Assignment group -> Mandatory, Urgency -> Read-only).
3. Show the onChange Client Script and demonstrate: set Impact to High on a form -> Urgency auto-fills + info message appears.
4. Show the onSubmit Client Script: try to save without Assigned To -> error box blocks save; fill it in -> saves successfully.
5. Show the onCellEdit Client Script: try editing State from the Incident list -> alert blocks it; then edit State from the form -> succeeds.
6. Change Impact back to Medium on an existing record -> show Assigned To no longer mandatory and Urgency editable again (reverse condition).

2.5 Final Output (30-45 sec)

Summarize what was achieved: a working, tested set of UI Policy + Client Script configurations enforcing data quality on Incident records, validated against all test scenarios in the Testing phase documentation.

2.6 Closing

Thank the viewer, mention the GitHub repo link is in the description for full documentation.

3. Submission Checklist

- ☐ Video recorded with screen share + voice-over
- ☐ Covers project name, purpose, benefits, execution, final output
- ☐ Uploaded to Google Drive
- ☐ Sharing set to "Anyone with the link can view"
- ☐ Link added to the project README and GitHub repository

4. Demo Video Link
